

Building Research for Integrated Primary Healthcare

PRIMARY HEALTH CARE LEARNING SERIES

Join us to learn about research and quality assurance projects being conducted by the primary and integrated health care community.

Informal professional learning in a community-based health education program: The transformative learning of one interprofessional team

Presenter: Maureen Coady

Dr. Maureen Coady is an Associate Professor in the Department of Adult Education at StFX. Her research focuses on the links between health and learning, and the role adult education can play in enabling learning, agency and improved health outcomes in the population. She co-ordinates an M. Ed. in Adult Education & Health at StFX and is particularly interested in empowering ways of working with people, which is the focus of this presentation: Informal Professional Learning in a Community-Based Health Education Program: The transformative Experience of One Interprofessional Team* Her most recent work focuses on continuing professional education (CPE), particularly as it relates to health contexts, but more broadly for all those engaged in professional occupations.

Pino (Eds.), Transformative learning, resilience, and professional identity formation, (pp.321-342). Information Age Publishing (IAP).

Shared Decision Making: A Missing Link in Pediatric Pain Management?

Presenter: Nicole MacKenzie

Nicole is a third year PhD student in Clinical Psychology at Dalhousie University, where she is supervised by Dr. Christine Chambers. She completed her BA in Early Childhood Studies at Ryerson University and an MEd in Developmental Psychology at the University of Toronto. Stemming from her research and volunteer experiences in pediatric health settings, her research interests within pediatric pain include interventions for procedure pain management and how shared decision making and knowledge mobilization can improve families' and healthcare providers use of evidence-based practices. Her current research is focused on understanding how diverse stakeholders engage with knowledge mobilization to promote uptake of evidence-based strategies to better manage children's pain. Nicole is supported by awards from the Maritime SPOR Support Unit, Research Nova Scotia, Killam Trusts, and is a past recipient of a BRIC NS Student Award.
